Living up to Life

Leica M822
The Ultimate Red Reflex Ophthalmic Surgical Microscope
Leica M822:
Legendary Leica, Visionary Technology

The Leica M822 ophthalmic surgical microscope features a dual illumination system with an LED for the main light and halogen for unsurpassed and stable red reflex. This innovative illumination system, combined with world class Leica optics, provides surgeons with unprecedented vision to perform surgery more precisely and efficiently.

› Optics and illumination
  Precision Leica optics paired with a dual LED and halogen illumination system for a brilliant, stable red reflex

› Ergonomic design and easy use
  Excellent vision, comfortable posture for the surgeon, and intuitive control for efficient workflow and precision microsurgery

› Total image management
  High-definition video for display, documentation, and communication of procedures and cases

› Flexibility with long term value
  OpenArchitecture™ to best handle a variety of surgical procedures, use of special accessories, and adapt to future needs
Optics and Illumination

Razor-sharp, high-resolution imaging with brilliant, stable red reflex

The unique combination of halogen and LED delivers bright, three-dimensional illumination and excellent red reflex. This innovation, paired with outstanding Leica optics, gives surgeons unprecedented vision to perform both cataract and retinal surgeries.

**LEICA OPTICS**

Images with natural color, superior depth of field, and high contrast deliver crucial information for successful ophthalmic surgery. The Leica M822 incorporates proven 800-series APO OptiChrome™ optics for high resolution of the smallest details.

**LEICA LOW LIGHT CONCEPT**

The extraordinary degree of light transmission and the high efficiency of the coaxial OttoFlex™ provide the surgeon with a bright, highly defined image, even at low light levels. The benefits for patient and surgeon are many: a more natural image for greater viewing comfort, reduced corneal glare, and greater efficiency – which can translate into better surgical outcomes.

**BRILLIANT, STABLE RED REFLEX**

With coaxial OttoFlex™ technology, the Leica M822 provides unsurpassed red reflex. Even the smallest cortical fragments can be clearly seen with minimal light. The large coaxial OttoFlex™ diameter provides stable red reflex throughout all steps of cataract surgery. Even if the eye moves intra-operatively during phaco, it remains in the field of illumination.

The Leica M822 builds on the success of the Leica M800 family, and includes a series of refinements and new features to give surgeons even more viewing comfort and flexibility.
leica M822 f20 / f40 / c40 / cT40 with led and direct halogen
other microscopes with halogen only and fiber optic cable
other microscopes with xenon and fiber optic cable

Comparison is based on initial purchase price, average consumption of bulbs and periodic fiber optic cable replacement costs.

Start saving from day one with the Leica M822 F20 / F40.
LED ILLUMINATION –
RELIABLE, SAFER, ECO-FRIENDLY, AND ECONOMICAL

THE DEPENDABLE CHOICE
An LED light source in a surgical microscope offers significant advantages over xenon and halogen sources. The nominal service life of an LED is 60,000 hours. In comparison, xenon and halogen lamps, but also fiber optic cables, need to be changed frequently. The reduced service requirement means fewer interruptions during surgery, more uptime, and smoother workflow.

CAREFULLY ENGINEERED
Leica Microsystems first introduced LED technology into ophthalmic surgical microscopes in 2008. With continued development and refinements, the Leica M822 microscope features the newest LED technology, which offers halogen-like light for a natural color rendering.

SAFER SURGERY
The Leica M822 microscope combines high transmission optics with a dual illumination system consisting of LED plus halogen. The result: a surgeon is free to adjust the optimum light balance, at the lowest possible light intensity, to achieve the best results in terms of red reflex, contrast, and recognition of important details.

ECO-FRIENDLY TECHNOLOGY
As efficient lighting technology, such as LED, become more of the norm, they are changing the energy paradigm. LED light has a lower energy consumption, longer lifespan, and greater durability and reliability than other sources. These characteristics, combined with Leica’s Low Light Concept, result in an environmentally-friendly microscope.

COST EFFECTIVE
LED illumination adds value by reducing operating costs throughout the life of the microscope. But the real savings is this: fewer lamp changes mean fewer disruptions and less downtime, which enhances efficiency.

The LED main light source provides many tangible and eco-friendly benefits in addition to a comfortable view.
Ergonomic Design and Easy Use

See better, work better, feel better

Working in comfort allows the surgeon to have full concentration. The Leica M822 is designed to not only give surgeons the best possible view, but also help them to feel better while working, day in and day out. Natural posture and fluid movement can mean less tension, less fatigue, and better work.

THE INUITIVE MICROSCOPE

The controls, adjustments, and movements of the Leica M822 are highly intuitive, making it comfortable to use. The controls and interfaces are designed for easy use, logical workflow, and personal preferences. At the microscope, absorbed in concentration, a surgeon can focus on the patient and surgery, not on the microscope settings.

FOR YOUR EYES ONLY

ErgonOptics™ is Leica’s broad range of interchangeable binoculars and lens types to meet the individual vision requirements of each user. No other microscope system offers such a wide range of lenses and binoculars for surgeons and assistants. The unique UltraLow™ III binocular for example moves lower than other binoculars to allow stacking of auxiliary accessories.
The Leica Rotatable Beamsplitter is the world’s first two-beampath solution for temporal approach cataract surgery. The easy, side-to-side quick change of the optics for the assistant observer saves time between cases and increases efficiency in the operating room.

When the surgeon pushes the swingarm up and away from the operating table after each procedure, all microscope functions automatically reset. Now the microscope is ready for the next operation. The staff does not need to reset the system beforehand, which saves time and provides peace of mind for staff and the surgeon.

The microscope is very convenient to position and move in the operating room. Leica offers floor stands and two space-saving ceiling mounts for the Leica MB22, so the optimal setup can be selected for any OR. Whether on a stand or ceiling mount, the swingarm provides long reach and quickly adjusts into position, locking in for a rock-steady view.

Pre- and post-surgery
SIMPLE AND VERSATILE CONTROL \(^{[4]}\)

The user-friendly touchscreen control unit offers intuitive control of all microscope functions. Up to 30 surgeons can set their individual preferences, so the microscope is always ready for each surgeon. With the touch of a button, the screen switches between microscope control display and real-time video monitor (two-in-one display).

MULTIFUNCTION CABLED AND WIRELESS FOOT SWITCHES \(^{[5]}\)

To meet the needs of all users, four models of foot switches are available: cabled or wireless, 12-function or 16-function, which offers four additional freely programmable microscope or accessory functions. The Leica Wireless Footswitch offers maximum mobility for fast, easy adjustments.

PRESETS FOR REPETITIVE PROCEDURES \(^{[6]}\)

StepCycle™ allows the surgeon to program and switch between predefined settings such as illumination, focus, and zoom for each step of a procedure. He or she can select these presets using the footswitch, which saves time and keeps the hands free for uninterrupted work.

During surgery

3 5 6

During surgery
Total Image Management

High definition video for display, documentation, and communication

When the surgeon wants to share still images or videos with OR staff in real time, show a colleague an interesting case, document a procedure for referring physicians, and facilitate consultation with a family – HD and the use of mobile devices are now standard.

STANDARD AND / OR HIGH DEFINITION VIDEOS

The Leica M822 OpenArchitecture™ allows the capture of digital standard videos and still images with a variety of commercially available cameras and recording systems. With the optional, compact Med X Change HDMD® All-in-One recording system, surgical cases can now be recorded in high definition. The user-friendly system can be mounted on the Leica F40 and C40 stands; the monitor can be rotated for convenient viewing.

DOWNLOAD AND SHARE

The Med X Mobile application uniquely facilitates wireless transfer of HD videos and still images from the microscope capture system to the Apple® iPhone®, iPod Touch®, or iPad® within seconds. With a USB cable, selected files can also be transferred to most Android™ devices. This allows cases to be transported, viewed, and discussed with colleagues or the patient’s family immediately after surgery.

MODERN VIDEO TECHNOLOGY

The Leica M822 offers an ideal package for capturing and exchanging video information:

› State-of-the-art HD recording system with MPEG4 video compression and picture-in-picture function
› Monitor arm with four movable joints for convenient viewing
› Selection of unique Leica video adapters for intra-operative fine focus of a video with manual or remote control, and integrated zoom function

Flexibility with Long Term Value

Flexibility today and compatibility tomorrow add up to a smart long-term investment

The Leica M822 includes mechanical and electronic interfaces to accept and easily mount a wide range of accessories – now and into the future. These improve workflow, support better surgical outcomes, and allow new surgical techniques to be adopted.

LEICA RUV800 [1]

The Leica RUV800 is the solution for panoramic viewing in retinal surgery. The integrated inverter gives the surgeon, assistant, and video camera the same upright view of the retina. The Leica M822 also fully integrates the commonly used wide-angle observation systems or stereo image inverters, such as the OCULUS SDI / BIOM® [2].

LEICA SLIT ILLUMINATOR [3]

This intra-operative precision surgical slit lamp is ideal for anterior and posterior segment surgery. Using the Leica slit lamp, both of the surgeon’s hands are free for the operation, which allows a more fluid procedure.

LEICA DI C800 [4]

With the Leica DI C800 head-up display, images from digital sources, providing an XGA signal, can be projected directly into the surgeon’s eyepiece. This cockpit-style display can show data precisely where the surgeon needs it.

LEICA TорIC EyePiece [5]

The Leica ToricEyePiece is a cost-effective, easy-to-use, time-saving aid for Toric IOL placement. The rotatable scale is superimposed over the microscope image to help the surgeon find the correct IOL positioning.

Using one microscope for cataract and vitreoretinal surgery is a very economical approach. It is easy to change the Leica M822 from one setup to the other.

Technical Specifications

The Leica M822 F20 / F40 / C40 / CT40 ophthalmic surgical microscopes feature precision Leica optics, a dual LED and halogen illumination system for brilliant red reflex and natural lighting, ergonomic design, intuitive control, total image management, and built-in flexibility to serve multiple uses and adapt to future needs.

**ELECTRICAL DATA**
- **Power supply F20**
  - 100–240 V, 50/60 Hz, 400 VA
- **Power supply F40 / C40 / CT40**
  - 100–240 V, 50/60 Hz, 300 VA
- **Safety class / Type**
  - Class 1

**LEICA M822 MICROSCOPE**
- **Magnification changer**
  - APO-Zoom 6:1, motorized, with 2 separate beam paths
- **Magnification**
  - 3.5× – 21× (WD 175 mm, 10× eyepieces)
- **Optics**
  - APO-chromatic corrected optics
- **Field diameter**
  - 7 mm – 80 mm
- **Working distance**
  - 175 mm, 200 mm, and 225 mm
- **Focus range**
  - 54 mm, motorized, with automatic reset
- **Eyepieces**
  - Widefield eyepieces for eyeglass wearers (8.33×, 10×, 12.5×)
  - Dioptric setting ±5 with adjustable eye cup
- **Objective**
  - Leica OptiChrome™, WD 175 mm, APO
  - Leica OptiChrome™, WD 200 mm, APO
  - Leica OptiChrome™, WD 225 mm, APO (WD = working distance)

**ILLUMINATION**
- **Main lamp**
  - LED
- **Coaxial OttoFlex™**
  - Two halogen lamps 12 V / 50 W
- **Quick-change lamp mount**
  - With two 12 V / 50 W halogen lamps for coaxial OttoFlex™

**LEICA F20 FLOOR STAND**
- **Type**
  - Floor stand with 3 friction brakes
- **Balancing**
  - Continuously adjustable gas spring
- **Load**
  - Max. 11.5 kg accessories attached to the microscope
- **Reach**
  - Max. 1480 mm
- **Vertical range**
  - 650 mm
- **Transport height**
  - Min. 1940 mm
- **Weight**
  - Approx. 270 kg as a fully configured system
- **XY-unit**
  - Motorized, movement range 50 × 50 mm, with automatic reset
- **Tilt mechanism**
  - Motorized, +15° / –50°
- **Hand / foot switches**
  - 16- or 12-function foot switch with controls arranged longitudinally or transversally, wired or wireless
  - 12-function hand switch
- **Control unit**
  - Two-in-one display: control and video display in one. The latest electronic control for the continuous governing of all motor functions and the light intensity. Data shown by means of LCD, with adjustable contrast and brightness. Operation by modern touch-panel control. ISUS™ Intelligent Setup System, menu selection based on unique software for user specific configuration, with built-in electronic auto-diagnosis and user support.
LEICA F40 FLOOR STAND, LEICA C40 CEILING MOUNT, LEICA CT40 TELESCOPE CEILING MOUNT

Type
Floor stand with 4 electromagnetic brakes

Balancing
Continuously adjustable gas spring

Load
Max. 12.2 kg accessories attached to the microscope

Reach
Max. 1492 mm

Vertical range
846 mm

Transport height
Min. 1949 mm

Weight
Approx. 330 kg as a fully configured system

XY-unit
Motorized, movement range 50 x 50 mm, with automatic reset

Tilt mechanism
Motorized, +15° / –50°

Hand / foot switches
16- or 12-function foot switch with controls arranged longitudinally or transversally, wired or wireless
12-function hand switch

Control unit
Two-in-one display: control and video display in one. The latest electronic control for the continuous governing of all motor functions and the light intensity. Data shown by means of LCD, with adjustable contrast and brightness. Operation by modern touch-panel control. ISUS™ Intelligent Setup System, menu selection based on unique software for user specific configuration, with built-in electronic auto-diagnosis and user support.

ACCESSORIES

Assistant attachment
Stereo assistant attachment

Beamsplitter
50% / 50%, 70% / 30%, Leica Rotatable Beamsplitter

TV / Photo
Leica 2D video systems
Leica MDRS4 digital recording system
Leica Zoom Video Adapter (VA) f = 35 – 100 mm, Manual VA 55/70 mm, Remote VA 55/70 mm
Photo/TV dual attachment: f = 80/95/107 mm for TV, f = 250/350 mm for 35 mm camera
Photo tube f = 250/350 mm

Wide-angle observation
Leica RUV80D
Interface for Oculus SDI / BIOM

Inverters (interface) AVI, SDI, DIVSI, ROLS

Laser interface
Interface to fit various commercially available lasers, adapters available from laser suppliers

Slit lamp
Motorized travel ±23°, slit width 0.01 – 15 mm, length 3 – 15 mm, rotatable 180°, quick-lamp changer

Imaging
Leica DI C800 high resolution true color digital imaging module for data display, 1024 x 768 pixel resolution

IDL Placement
Leica ToricEyePiece

Binocular tubes
Variable angle 0° – 180°
Variable angle 30° – 150°
Variable angle 10° – 50° UltraLow™ III
Variable angle 10° – 50°
Variable angle 5° – 25°
Inclined angle 45°

Hand / foot switches
wired 16- or 12-function foot switch with controls arranged longitudinally or transversally
wireless 16- or 12-function foot switch with controls arranged longitudinally or transversally (optional)
12-function hand switch

Asepsis
Sterilizable protective glass for the objective, sterilizable components for all drive knobs, commercially available drapes

Network (optional)
DICOM compatibility for both videos and still images, archiving to patient records with Leica MDRS4 / Med X Change HDMO®

HD IMAGING

STANDARDS

The Medical Division, within Leica Microsystems (Schweiz) AG, holds the management system certificates for the international standards ISO 9001, ISO 13485 and ISO 14001 relating to quality management, quality assurance and environmental management.
Leica M822 C40

Leica M822 CT40

Dimensions in mm
The fruitful collaboration “with the user, for the user” has always been the foundation of Leica Microsystems’ innovative strength. On this basis, we have developed our five corporate values: Pioneering, High-end Quality, Team Spirit, Dedication to Science, and Continuous Improvement.

**MEDICAL DIVISION**

What does a surgeon expect from an outstanding surgical microscope? Sharp, clear images, and a modular system aligned with the surgeon and OR staff needs.

**Innovations for your practice**

From the first surgical microscope with widefield optics in the 1980s to the first microscopes with Horizontal Optics and with LED illumination, Leica Microsystems has been at the forefront of innovation in the development of surgical microscopes.

HD video, fluorescence and retinal viewing systems also demonstrate the continued innovative nature of the Leica team. We strive to provide the surgeon with leading edge technology to enhance performance, surgeon comfort, and patient outcomes.
